Welcome to Riga Angus

A Family passion and commitment to agriculture has resulted in a decision to host our Inaugural Yearling Bull Sale, with the main objective being to improve efficiency, productivity and profitability moving forward.

This decision compliments our breeding philosophy “profitability lies in the performance and efficiency of the cow herd.” The females go through a rigorous selection process where structure is recognised as important because it enables the desired genetics to be delivered to its end destination. Riga females have now consistently placed in the RASV Heifer Challenge, being awarded Champion 2013 and finalist 2014 and 2015. These females are representative of our production system and our philosophy.

The bulls in this catalogue are a product of this and provide you with an opportunity to buy into this proven success. This drop of “L” bulls have exceeded all expectation in their efficient conversion of their diet of Slingshot pellet and feed tested cereal hay. We have been able to use less product to achieve our growth and weight objectives to sale day.

Thus far this combination of genetics and nutrition is driving productivity in the right direction. The bulls have been carefully managed and prepared to ensure you can purchase a yearling with maximum confidence and access these herd improving genetics a year earlier than normal, resulting in accelerated genetic gain. The main sires represented this year are Silveiras Conversion 8064, Connealy Revenue 7392, TC Franklin 619, Werner Westward 357, Bald Blair Debonair D34 and Riga Harry H5. These sire lines contribute growth, marbling, EMA and Retail Beef Yield, which when mated with our fertile, easy doing and functional females has produced this line up of bulls which display exceptional muscle pattern, weight, and scrotal size for age. These bulls tick a lot of the important production boxes for the Beef Producer.

We look forward to welcoming new clients whilst appreciating and maintaining existing relationships. We are only a phone call away, with many contacts within in the industry.

We wish everyone a great breeding season with profitable outcomes.

The Finger Family,
Ian, Vera, Kate and Tim

**riga** ANGUS
STUD

Do you want to lower the cost of your production? Or make your financial investments last longer? Perhaps you want to accelerate the genetic gain in your herd? Well if you answered yes to any of these questions then you might want to consider investing in a yearling bull(s).

Yearling bulls are becoming a popular choice for cattle producers. Many progressive beef producers are already enjoying the vast array of benefits that are associated with using younger bulls. They not only make sense genetically but also financially.

Yearling bulls allow the introduction of elite genetics much earlier and therefore accelerate the rate of genetic improvement within your herd. Using younger bulls can also result in a longer working life of each bull and therefore lowers your cost of production by reducing bull costs per calf. In addition yearling bulls can extend the use of your bull over heifers and they are generally more adaptable to new environments. Younger bulls are strong, keen, lean, fit, agile and ready for work.

However, to be able to access these benefits, the management of these bulls is very important to allow them to reach their maximum potential. Young bulls are still growing and so their health and body condition are far more sensitive to poor nutrition and being over worked. Younger bulls are more prone to injury when mixed with older bulls, therefore they should be allowed to join a group of females either individually or with bulls the same age. Young bulls should be allowed to join for 6-8 weeks only and then they should be spelled for at least 3 months. Once you have removed your yearling bull(s) from their joining groups it is important to place them on a high quality feed in specially prepared paddocks.

At Riga Angus selling yearling bulls to our client base is not new, with many achieving a range of exceptional results.

“Our family has been using Riga Bulls for twenty years. Riga keeps a record of all the bulls that we purchase and is able to advise us on suitable bulls for our improvement. They help us select bulls with good temperament which is essential for our operation. Riga’s strict culling for poor structure, especially feet, has given us excellent feedback from feedlot buyers. Riga’s bulls generally have excellent fertility. Any problems have been promptly replaced. Riga’s high priority on muscle and correct structure, plus the advantage of being able to purchase bulls at a younger age is great asset to our operation. One bull Y49 had sired 102 calves by the time he was two years old.”

- Sam and Bill Parsons “Wolverton” Maindample, VIC.

Feel free to contact us if you would like to discuss using yearling bulls in your operation or if you have any further questions. If you would like more information on yearling bulls please check this link <http://www.dpi.nsw.gov.au/agriculture/livestock/beef/breeding/bulls/yearling-bulls>.

Sale Information

Inspection

All bulls can be inspected from 10am on Sale Day or at any time prior to the Sale. Simply contact Vera on mobile 0429 939 105 or email info@rigaangus.com.au to arrange a time.

Method of Selling

The sale tent is in close proximity to the bull pens. The auctioneer will sell the bulls by Open-Cry with the screening of an individual photo featuring the lot that is being auctioned.

Insurance

We strongly recommend insuring your new bull(s). CGU insurance will be available on the day.

Transport

As part of our service we will deliver the bulls locally and to major centres within Victoria. Make sure you fill out your delivery instructions and we will contact you to arrange a delivery time. If you have your own transport, please tell the office staff at time of settlement.

NLIS and Angus Society Transfers

Riga Angus will provide complementary NLIS and Angus Society transfers.

Johne's Disease

Riga has a herd status of BEEF ONLY

GST

The sale is GST EXCLUSIVE.

Refreshments

Morning tea will be available from 10:30am onwards. Lunch is provided and will be available from 12 noon, prior to the commencement of the sale at 1:00pm.

Accommodation

A range of excellent accommodation is available in Mansfield and we highly recommend the official Tourism Site www.mansfieldmtbuller.com.au or call them on 1800 039 049.

Safety

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with handling cattle. Visitors enter the cattle pens at their own risk. Children must not enter the yards. People entering the yards are at risk of injury. Be especially alert for bulls fighting. We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal. Please do not crowd the bulls or loiter inside the pens.

Bull Information Package

If you have purchased a bull on sale day please collect your bull(s) information package from the main office.

Animal Health

All bulls within this sale catalogue are current holders of a Zoetis Star Certificate. This means that they have been:

- Ear notch tested free of Pestivirus
- Vaccinated twice with Pestiguard
- Vaccinated twice with 7 in 1
- Vaccinated twice with Vibrovax

In addition to the above treatments the bulls have also been injected with the following on 06/12/2015:

- Selovin LA, long acting selenium
- Vitamin ADE and B12
- Piliguard
- Dectomax

Quality Assurance

All bulls within this sale catalogue have been:

- Independently assessed by Mr. Dick Whale of Independent Breeding & Marketing Services on 15/01/2016
- Scanned and assessed for structure, temperament, scrotal size and muscle by Liam Cardile of Beef Xcel on 08/02/2016
- Parent verified to sire and dam where possible
- Fertility tested by Dr. Anna Manning of Delatite Veterinary Services in April, just prior to the sale.

Nutrition

All bulls within this sale catalogue have been fed a ration of SlingShot pellet and cereal hay. By sale day they will be on a ration of 2 kg pellets and ad lib cereal hay. We believe it is important to offer bulls in good working order but not overfed, to ensure longevity. Tips on their management post sale is included in the bull information packages. This has been provided by Ellen Versteegen, North East Victoria Territory Manger for Rivalea Australia.

Fertility/Physical Examination

Dr. Anna Manning of Delatite Veterinary Services has evaluated each individual bull and found the bulls to be in good reproductive health ready for your breeding season. Each bull has had the following assessed:

- Musculoskeletal – including feet
- Palpation of scrotal contents and measurement of testes (cm)
- Examination of penis
- Internal palpation of accessory sex glands
- Semen quality

Fertility Guarantee

All bulls have been evaluated for structural soundness and inspected for fertility by a veterinarian. To the best of our knowledge the bulls are in sound working order at the time of sale. During the next 12 months if a bull becomes infertile or breaks down due to reasons other than illness, injury or disease after leaving Nillahcootie Park, we will provide you with a satisfactory replacement if available OR credit you the purchase price less the salvage value which may be used towards a future purchase. In some instances a refund of the balance may be an option. A claim is to be accompanied by a vet certificate with the costs the responsibility of the purchaser within 12 months of purchase. We strongly recommend you insure your investment.

Recessive Genetic Conditions

All our sale bulls are free from AM, NH and CA. In the case of DD, the bulls are either pedigree free or have been tested for DD with the result clearly displayed.

The following nomenclature identifies the status of the bulls in the catalogue.

- AMF = Tested AM free
- AMFU = Based on pedigree AM free. Animal has not been tested
- AM% = _% probability the animal is an AM carrier
- AMC = Tested AM carrier

For NH, CA and DD simply replace AM in the above table.

Rebates & Payment Instructions

5% REBATE

All agents that attend this sale and purchase with or on behalf of their respective client(s) and settle within 7 days will receive a 5% rebate.

2% REBATE

All agents who introduce their client(s) but do not attend this sale and settle within 7 days will receive a 2% rebate.

2% DISCOUNT

Clients who choose to settle personally by Cheque or EFT on the day of the sale will receive a 2% discount on their purchase. In this case the agent rebates are not applicable.

CREDIT CARD

Clients can receive a 1% discount when paying by credit card on sale day. In this case the agent rebates are not applicable.

FREE DELIVERY

Riga Angus will deliver bulls free in the local area and to major centres within Victoria.

AGENT INTRODUCTIONS

Bringing Your Yearling Bull Home

We are very proud of your yearling bull and as such have invested considerable effort to prepare him for you in readiness for your operation. To prevent a check in growth prior weaning he was taught to eat his new diet in the companionship of his mother and other adult cattle.

At weaning and post weaning he now has a newly established peer group and a very familiar daily routine. Familiar voices, stable diet and is handled with respect and patience. He has been frequently exposed to yards, moved on foot with a stock whip, motorbike and on horseback. He has seen dogs but is not used to being moved by them. They have never experienced an electric prodder. Whilst being photographed the bulls were individually placed under significant pressure and responded impeccably reinforcing their great temperament.

Your bull will now leave his secure environment and it is now your obligation to look after your investment. As your bull is subject to transit, loss of mates, familiar noises, routines, new paddocks, different feed and water there are some things you can do to facilitate his transition into his new surrounds.

On arrival he is best left in secure yards with plenty of feed, water and shade/shelter, with some cattle other than bulls close by so that he can perhaps communicate with them through the yards but not feel threatened. The next day you may wish to give him a drench. All other health treatments are up to date. He is then ready to go with a small group of animals or a single companion where he will not be dominated until he settles into his new surrounds prior to joining.

Your bull has been prepared ready for service on sale day. In reality many of you will use him anywhere from 15-18 months of age. A mating load of 25-30 females is recommended in the first season for 6 - 8 weeks. These can be either heifers or cows dependant on physical size. A young bull may take a few days to settle into duty.

Once joining is set up he should be checked 2-3 times a week for the first three weeks to ensure he has not sustained injury. Then weekly to enable monitoring of cycling numbers of females. Many prepuce and penile insults can be treated very effectively if caught early. Similarly any signs of lameness, lethargy, ill health must be addressed promptly to ensure the care of your investment and conception rate of the females.

Most new bull fertility issues develop during joining, rather than being part of a pre existing problem. This means that joining mob surveillance is a non negotiable to the long term success of your operation.

Post mating you need to ensure rest, good nutrition and maintain annual vaccinations. He should then provide you with many successful mating seasons.

An outcross pedigree with excellent feet, length, frame, growth and milk. Super quiet. Sire of lots 21, 22, 23.

Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement throughout all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

RIGA Structural Program

The 2016 'Riga' Sale Bulls have been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft. The Riga sale bulls were assessed by Liam Cardile of BEEFXCEL on 08/02/2016.

HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs.

However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.

- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

For more information call Liam Cardile on 0409 572 570

Genetic Type Summary (GTS)

All RIGA cattle have been assessed on the GTS Type/Structure system. All the cattle are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups, descriptive traits and structural soundness traits. Animals outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide; it is not a guarantee of the lifetime structure soundness of an animal. Where possible the Beefclass equivalent has been put alongside the GTS score for comparison.

DESCRIPTIVE TRAITS

STATURE	Evaluation for Frame Size. A maturity pattern 25 is an average frame. This may be influenced by age of dam, particularly 1st calf heifers.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Frame Score		3	4			5			6	7	8
	Less than Average Frame				Average Frame			Greater than Average Frame			

CAPACITY	An animal's evaluation combining depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicates larger capacity.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass		3	4			5			6	7	8
	Less than Average Capacity				Average Capacity			Greater than Average Capacity			

BODY LENGTH	Evaluation of body length from withers to pins, Scores greater than 25 indicate longer body length.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
	Shorter Body Length				Average Body Length			Longer Body Length			

MUSCLE	Scores higher than 25 indicate above average muscle. More muscle equals more meat.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass	D-	D+	C-			C+			B-	B+	
	Less Muscle				Average Muscle			Greater Muscle			

DOING ABILITY	Ability to lay fat relative to their peers under common management.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
	Worse				Good			Better			

STRUCTURAL SOUNDNESS

FRONT FEET	Feet are a crucial structural component of a sound animal. Although impossible to get perfect the closer to a score of 25 the better.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass	9	8	7	6		5		4	3	2	1
	Tending Scissor Claw				Ideal			Tending Open Clawed			

BACK FEET	Feet are a crucial structural component of a sound animal. Although impossible to get perfect the closer to a score of 25 the better.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass	9	8	7	6		5		4	3	2	1
	Tending Scissor Claw				Ideal			Tending Open Clawed			

LEG ANGLE	Leg angle relates to the longevity of an animal. Too straight and a bull can't service successfully leading to breakdown or arthritis, Sickie hocked and walking is difficult leading to breakdown.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass	1	2	3	4		5		6	7	8	9
	Tending Post Legged				Ideal			Tending Sickie Hocked			

PASTERNS	If an animal does not stand correctly on its pasterns, uneven claw wear will result. This can lead to structural breakdown in the feet.										
GTS Score	10	15	20	22	23	25	28	29	30	35	40
Beefclass	1	2	3	4		5		6	7	8	9
						Ideal					

SHEATH	To loose and service is more difficult and can lead to injury.				
GTS Score	1	2	3	4	5
Beefclass	1	2	3	4	
	Loose		Ideal →		

GRADE	The better the grade the better the animal.							
GTS Score	1	2	3	4	5	6	7	8
	Cull	Just	Average	Good	V Good	Top	Excellent	Stud Sire

▲ Negative (lower) values more favourable

▲ Negative (lower) values more favourable

▲ Negative (lower) values more favourable

* based on EBVs from the March 2016 Angus BREEDPLAN analysis.

Understanding Estimated Breeding Values (EBVs)

Estimated Breeding Values (EBVs) are predictions of an animal's genetic merit, based on available performance data on the individual and its relatives.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences from the breed base. As the breed base is set to a historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic change within the breed. The current breed averages are shown below. These averages provide a useful benchmark for comparing EBVs for animals.

	March 2016 Angus Australia BREEDPLAN										
	Calving Ease Dir	Calving Ease Dtrs	Gest Length (days)	Birth Wt (kg)	200 Day Wt (kg)	400 Day Wt (kg)	600 Day Wt (kg)	Mature Cow Wt (kg)	Milk (kg)	Scrotal (cm)	Days to Calving (days)
	-0.1	+0.0	-3.5	+4.3	+41	+75	+98	+87	+14	+1.6	-3.6

Carc Wt (kg)	EMA (sq cm)	Rib Fat (mm)	Rump Fat (mm)	RBV (%)	IMF (%)	NFI-p (kg/d)	NFI-F (kg/d)	Doc-ility	Angus Breeding	Dome- stic	Heavy Grain	Heavy Grass
+54	+4.4	+0.0	-0.1	+0.2	+1.5	+0.09	+0.16	+4	+\$102	+\$101	+\$104	+\$102

CALVING EASE TRAITS

Calving Ease (DIR): estimate of genetic differences among animals in the ability of their calves from 2 year old heifers to be born unassisted. Higher, more +ive, Calving Ease (DIR) EBVs are more favourable.

Calving Ease (DTRS): estimates of genetic differences among animals in the ability of their 2 year old daughters to calve without assistance. Higher, more +ive, Calving Ease (DTRS) EBVs are more favourable.

Gestation Length: estimate of genetic differences among animals in the number of days from the date of conception until the calf birth date. Lower, or more -ive, Gestation Length EBVs are generally more favourable.

Birth Wt: estimate of genetic differences between animals in kg of calf birth weight. Calf birth weight is the biggest contributing factor causing calving difficulty in heifers. While low Birth Wt EBVs are favoured for calving ease they are also often associated with lower growth potential. Small, or moderate, Birth Wt EBVs are more favourable.

FERTILITY TRAITS

Days to Calving (DC): estimate of genetic differences among in female fertility, expressed as the number of days from the start of the joining period until subsequent calving. Females with shorter DC EBVs tend to commence cycling earlier after calving and conceive earlier in the joining period. They also tend to attain puberty at a younger age as heifers. Lower, or more -ive, Days to Calving EBVs are more favourable.

Scrotal Size: estimate of the genetic differences among animals in scrotal circumference at 400 days of age. Increased scrotal size is associated with increased semen production in bulls, and earlier age at puberty of bull and heifer progeny. Larger, or more +ive, Scrotal Size EBVs are more favourable.

GROWTH TRAITS

200-Day Wt: estimate of the genetic differences among animals in weight at 200 days of age. This is a measure of an animal's early growth to weaning. It is an important trait for breeders turning off animals as vealers or weaners.

400-Day Wt: estimate of the genetic differences among animals in weight at 400 days of age. This is an important trait for breeders turning off animals as yearlings.

600-Day Wt: estimate of the genetic differences among animals in live-weight at 600 days of age. This is an important trait for breeders targeting the production of animals suited for heavy weight grass finished or grain fed market

MATERNAL TRAITS

Milk: estimate of the genetic differences among animals in milk production potential, expressed through variation in calf growth performance. Larger, more +ive, or moderate, Milk EBVs can be more favourable, depending on the environment.

Mature Cow Wt: estimate of the genetic differences among animals in cow weight at 5 years of age.

EBVs Explanation

CARCASE TRAITS

Carcase Wt: estimate of the genetic differences among animals in hot standard carcass weight at 750 days of age. Larger, more +ive, Carcass Weight EBVs are more favourable.

EMA: estimate of the genetic differences among animals in eye muscle area (cm²) at the 12/13th rib site on a 400kg carcass. Larger, more +ive, EMA EBVs are generally more favourable.

Rib Fat: estimate of the genetic differences among animals in fat depth (mm) at the 12/13th rib site, measured on a 400kg carcass. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

Rump Fat: estimate of genetic differences among animals in fat depth at the P8 rump site on a standard 400kg carcass. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

IMF%: estimate of genetic differences among animals in percentage intra-muscular fat (marbling) in a 400kg carcass.

EFFICIENCY TRAITS

Net Feed Intake (NFI): estimate of the genetic differences between animals in efficiency. NFI is measured either post weaning (NFI-P), in young bulls and heifers, fed at around 300 days of age, or in steers fed at around 560 days of age (NFI-F). Lower, more negative (-ive) NFI EBVs are more favourable.

TEMPERAMENT TRAITS

Docility: estimate of genetic differences between animals in temperament. Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless"). Higher Docility EBVs are more favourable.

INDEX VALUES

Angus Breeding: estimates the genetic differences between animals in net profitability per cow, joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

Domestic: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

Heavy Grain: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

Heavy Grass: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture finished heavy steers.

TRAITS OBSERVED

Indicates the traits that have been recorded for a particular animal and are contributing to the EBVs that have been calculated. These will appear directly below the table displaying the animals EBVs.

UNDERSTANDING ACCURACIES

The accuracy associated with an EBV gives an indication of its reliability, and the likely extent of its possible change as more information becomes available. As more data becomes available on animals (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

Accuracies are influenced by the heritability of traits and the genetic associations existing between them. For lowly heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits.

Accuracies are expressed as percentages. The higher the percentage, the greater the chance that the EBV is a close estimate of the animal's true genetic merit, and the less likelihood that the EBV will change as more information becomes available.

IMPORTANT NOTICES FOR PURCHASERS

~ SALE CATALOGUE DISCLAIMER ~

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

~ DNA PATERNITY VERIFICATION ~

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

~ PRIVACY INFORMATION ~

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

*I, the buyer of animals with the following registration numbers
..... from
member (name) do not consent to Angus Australia
using my name, address and phone number for the purposes of effecting a change of registration of
the following animal(s) that I have purchased, maintaining its databases and disclosing that
information to its members on its website.*
